SUMMER MANAGEMENT

- Dr. Krishna Mankar

Important Tips :

As summer is on peak, following problems are noticed across the country Farmers to be educated and advised in a proper way during this is time.

Problems seen sporadically are

- 1] Low feed intake – Should be fed in cooler part of the day.
- 2] Waterborne diseases – Because of high pH - most of the Infectious / respiratory problems occurs. **Cool water supply.**
- 3] Provide Floor space atleast 25-30% more than in normal period.
- 4] RD –First Local Veterinarians advise to be taken.
We advice aluminum hydroxide gel killed vaccines called ND Killed.
Never advice Lasota ,because it will trigger respiratory sounds.
Go for day 5 and 20 - clone 30 .
In case of outbreak ,vit E and Se in water along with copper sulphate.
- 5] VVND - so called Avian Influenza - high mortality is ensured and only good bio security with sulpha medication can reduce the incidence.

FCR has increased because of non feed reasons at several times.

The diseases caused by:

- Viruses (Newcastle Disease, Gumboro, Avian Influenza, Duck plague)
- Bacteria (Fowl Cholera, Salmonella, Mycoplasma, E. Coli, Escherichia coli)
- Fungi (Aspergillus, Mould, Mycotoxins)
- Protozoa and Parasites (Coccidiosis, Intestinal Worms, Ice Berries)

Which diseases do you see at your farm?

What are the threats to poultry farms?

Dr. Aakash Varshney

Broiler Vaccination cum-medication schedule

- Dr Deepak Dhapke

Sr.No.	Day	Medication
1	1st day	Spray the good quality of probiotics over the chicks to provide a healthy environment. electrolytes 1gm/lit, Jaggery 1kg for 1k birds and start paper feeding.
2	2nd day	Antibiotics therapy (To protect from the hatchery infection). Biotrim (sulha drug) 0.75ml/bird or Ciprofloxacin@ 10mg/kg bwt for 24hrs (For 3 days.) or Lixen(Cephalexin) @ 20 gm/1500 chicks for 3 days to prevent Early Chick Mortality. Vitamin therapy (AD3EC) vimeral(virbac) or stresswell @ 3-5ml/100birds and E. care Se. 5gm/100 birds. (For 3 days.) Provide probiotic after the antibiotic therapy to recover the gut microflora damage.(For 3 days.)
